### Product Description

## JCB 2TS-7T TELESKID Compact Track Loader

**The 2TS-7T is the world's first and only small-platform compact track loader with a telescoping boom. This boom allows the operator to lift higher, reach further, and dig deeper than any competing machine.**

The telescopic boom allows the 2TS-7T to achieve its 11 feet 10 inches of lift height. This substantial height provides the operator the opportunity to dump material and stack pallets or bales higher than ever before – freeing up valuable ground space. With a full 7 feet of forward reach, 60% more forward reach than conventional compact track loaders, operators now can load both sides of a flatbed trailer from one side. This large reach helps reach over fences and other obstacles to place loads.
